Arian Delavarjou

ariandelavarjou@gmail.com
LinkedIn: Arian Delavarjou
GitHub: Itsariandl

Skills

Operations Tools: Linux, Docker, Kubernetes, Helm, Terraform, Ansible, Clickhouse, Kafka, Keycloak

Observability Tools: Grafana, Loki, Tempo, Mimir, Alloy, OpenTelemetry, Prometheus, Alertmanager,

CI/CD: GitHub Actions, Gitlab CI/CD, ArgoCD, n8n

Cloud Vendors: Amazon Web Services (AWS), Google Cloud Platform (GCP)

Programming Languages: Python, Golang

Web/DB Technologies: HTML5, NextJS, CSS3, JavaScript, MySQL, PostgreSQL, MongoDB

Experience

DevOps Engineer at **OPTIOP GmbH** Nov 2023 – Present

- Designing and managing open-source observability stacks (LGTM+ stack) for scalable, reliable monitoring across client environments.
- Automating and optimizing development and operations workflows to improve deployment speed and reliability.
- Managing Infrastructure as Code (IaC) with Terraform and Ansible to ensure scalable and consistent environments.
- Leading Cloud Engineering initiatives on AWS to modernize infrastructure and streamline deployment processes.
- Enhancing application reliability and scalability through Kubernetes orchestration and CI/CD automation.
- Leveraging AI-driven analysis to optimize alerting, reduce noise, and right-size monitoring resources,
- Improving observability while lowering infrastructure and monitoring costs.
- Delivering enterprise-grade monitoring solutions to client companies, translating complex observability requirements into production-ready and scalable stacks to each organization's needs.

Network Engineer at **Maskan Bank** 4 months

- Implemented and maintained the AAA server (Authentication, Authorization, Accounting) and the network infrastructure.
- Improved reliability and security across the nationwide banking network.
- Upgraded and optimized the bank's mail server to enhance internal communication performance.
- Worked side by side with the SOC (Security Operations Center) and NOC (Network Operations Center) teams on security monitoring, incident response, and network operations.

DevOps Engineer / System Administrator at **Ghasadak Samaneh** Oct 2022 – Sep 2024

- Started as a PHP Developer building SAMFONY, a telecom Business Support System (BSS), before moving into infrastructure and DevOps roles.
- Provided 24/7 on-call support for critical infrastructure serving major Iranian ISPs and upstream providers.
- Maintained and optimized core infrastructure services such as AAA, DPI, IPDR/CGNAT, and Mail Servers.
- Built the company's first DevOps unit, automating infrastructure management and establishing monitoring systems for internal and customer networks.
- Implemented CI/CD pipelines to streamline software deployment and improve release management.
- Led the migration of legacy systems to modern architectures, improving scalability and maintainability of legacy applications.

Projects

Cequence Obseverability Stack
Role: DevOps Engineer
Description: In this project, we built an observability stack from the ground up to monitor all components across both pre-production and production environments, ensuring complete visibility into application performance. Our goal was to efficiently manage heavy loads of logs and metrics while optimizing dashboards for the best user experience. We focused on making the information clear, actionable, and easy for both developers and operations teams to understand and act upon. Additionally, we implemented custom alerting systems tailored for the operations team, ensuring they receive timely and accurate alerts for both application and server-related issues. This setup not only improved proactive incident response but also streamlined monitoring and troubleshooting processes for the entire organization.
Tools: Kubernetes, Ansible, Helm, ArgoCD, Terraform, Grafana, Prometheus, Alertmanager, Loki, Thanos, HAProxy

NexVision incident management
Role: DevOps Engineer
Description: In this project, we developed an automated pipeline for building applications and plugins to enhance the developer team's workflow. We utilized AWS CDK to create a full-stack solution, enabling the creation of servers and all necessary components with a single command. Additionally, we integrated AWS Cognito for user management, enabling Single Sign-On (SSO) for Grafana login, simplifying access control and improving the security of our monitoring platform.
Tools: AWS, Docker, GitHub Action, Grafana, Prometheus, Loki, Alertmanager, HAProxy

Vipar Monitoring Stack
Role: DevOps Engineer
Description: In this project, we used Ansible to automate the installation of Node Exporter across over 70 Windows and Linux servers, collecting key metrics for Prometheus monitoring. We created custom dashboards to provide a comprehensive view of all servers and their behaviors, ensuring full visibility into system performance. Additionally, we implemented alerting rules to guarantee that the operations team receives notifications for any critical events, enabling quick and efficient response to issues.
Tools: Ansible, Grafana, Prometheus, Alertmanager

Nphaze/Pfizer Observability Platform
Role: DevOps/Observability Engineer
Description: As part of the Optiop team engaged on the Nphaze project, deployed and operated an LGTM monitoring stack (Loki, Grafana, Tempo, Mimir) for both Nphaze and Pfizer with alert routing to increase observability and visibility across applications and infrastructure. We managed to migrated the client from a legacy Prometheus/Promtail/Node-exporter setup to an operational Mimir/Alloy/Loki deployment across all infrastructure. Monitored both EC2 and EKS infrastructure and the applications running on them. Investigated recurring application issues and delivered AI powered runbooks so teams could gain better insight into their own application issues, and built RCA dashboards tailored to each team's needs.
Tools: Grafana, Loki, Tempo, Mimir, Alloy, Prometheus, Alertmanager, AWS EC2, AWS EKS, Argocd, Kubernetes, Linux

Honors and Awards

IELTS – B2 English Proficiency

CS50: Introduction to Computer Science – Harvard University

Language Proficiency

◇ English (C1) ◇ German (B1) ◇ Persian (native)

Interest

◇ MLOps ◇ Cloud Computing ◇ Machine Learning ◇ Automation ◇ Monitoring

Hobbies

◇ Football ◇ Music ◇ Video games

Education

B.Sc. in Computer Engineering September 2021 – August 2025
Payame Noor University, Lavasanat Branch, Tehran, Iran

Salam High School September 2018 – June 2021
Salam High School, Tehran, Iran
